Revolution-U Sounds for the Athearn UP Turbines

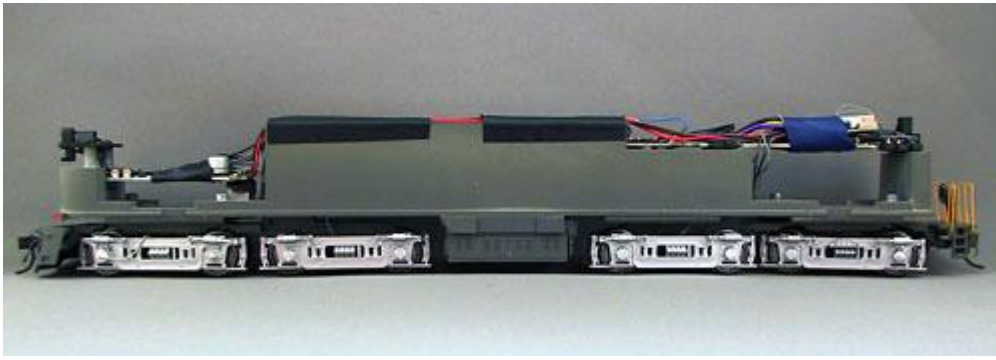

Posted on 23. July 2009

The unique Athearn Turbine locomotives are now shipping. The [Quantum Revolution-U](#) is the ideal sound decoder option for this locomotive.

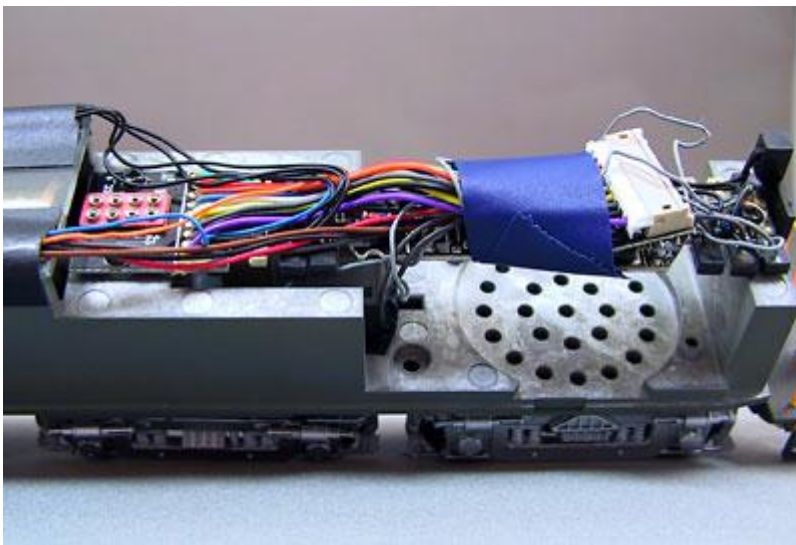

1. The Revolution-U format make this an easy PnP installation.
2. QSI is the only DC/DCC sound decoder to offer the Turbine sound files.
3. Turbine Revolutions include one of the proper size 1.25" speakers. The loco has cut-outs for 2 speakers, recommended to do this. We also used one QSI 1.22" dia. [HB speaker](#) in place of one of the 1.25" units.
4. The speakers should be wired in parallel as this will optimize the sounds.
5. QSI decoders are the only decoders that support complete operations and programming functions in analog/DC.
6. Installation photos:

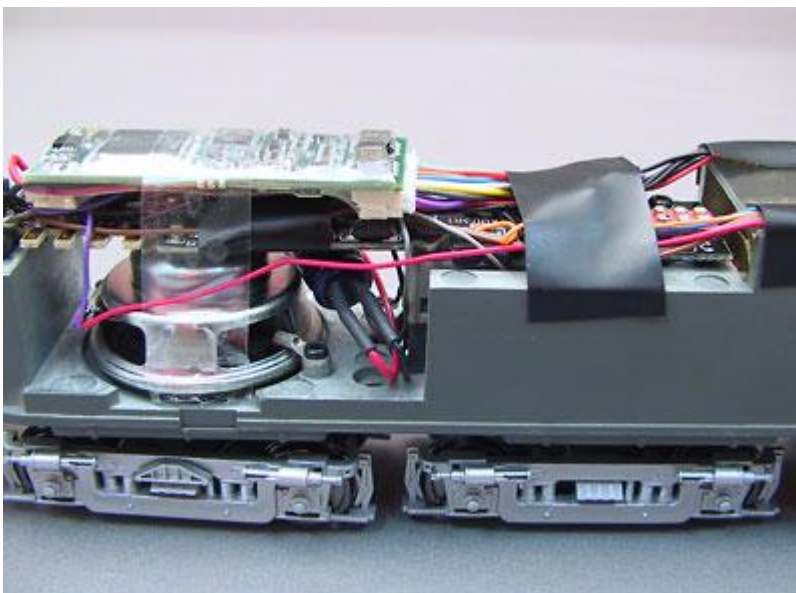

Forward speaker cut-out

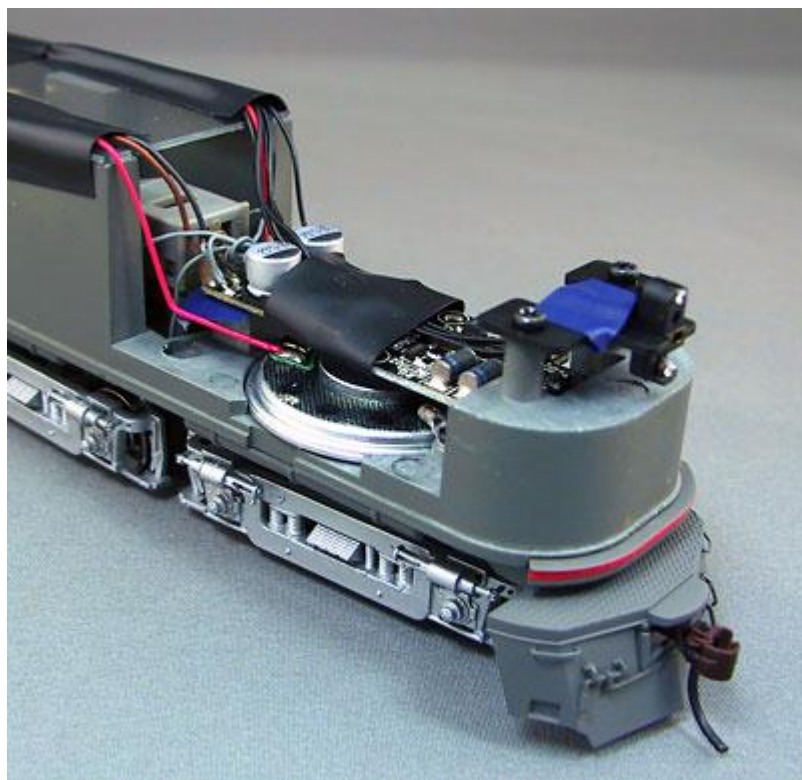

Loco before installation

Aft speaker cut-out

1.22" HB speaker, aft location with Revolution-U connected to the loco "Quick Plug"

Forward 1.25" speaker installed
